

The MTD Kingston Difference

Michael Tobias Design®

Part Four: The MTD Quick Release Bridge

Michael Tobias' Quick Release bridge has pro players and bass techs cheering. Michael designed his bridge to strongly deliver in three areas: Set up flexibility, long-term reliability and better string changing capability.

Set-up Flexibility: Michael stayed with a system of adjustable points that has worked perfectly for him for several decades. Changing the individual string height and intonation is a breeze and does not require any special tools or an engineering degree.

Long-Term Reliability: Mr. Tobias choose the best materials available and personally made sure that the manufacturing adhere to his strict tolerances and quality control.

Better String Changing Capability: It is in this area where Michael's bridge truly shines. Gone are the days where you have to pull a string through a small hole, scratching the body in the process. Simply loosen the string and you can quickly (hence the name) remove the string and replace it in a matter of seconds.

Go down to your favorite MTD Kingston dealer and check out the simple and elegant MTD Quick Release bridge that has everyone so fired up!
